

Andon Digital Alert

Touch Screen Messaging Solution

Andon Digital Alert is a simple to implement solution to help streamline production and instantly notify the correct team when there is an issue. Andon Digital Alert is designed to provide easy to use instant communication with all staff across the site.

Andon Digital Alert tablets can be wall, machine or desk mounted and configured with one to six separate call buttons. Each button can be configured with the required button label, button colour and messages to be sent.

Messages from Andon Digital Alert can be routed to individual staff members or groups of staff as required with every message showing the location of the calling area and alert message.

There is no limit to the number of Andon Digital Alert tablets that can be utilised on a single system, each Andon Digital Alert display has a location name which is sent along with the message when staff are called. Enabling staff members to know what location is calling and the requirement.

When an Andon Digital Alert button is activated the user is immediately notified by the button changing state from its ready to call state to called state with a distinctive red screen.

Andon Digital Alert has no limit on range, with Andon Digital Alert's unique RF technology even the largest sites can receive full coverage.
