

## Call Point for Industry

### Tablet Based Messaging Solution

Call Point is the next evolution of our market leading push for service buttons. Call Point is designed to provide easy to use instant communication with all staff across the site.

Call Point tablets can be wall or desk mounted and configured with one to six separate call buttons. Each button can be configured with the required button label, button colour and messages to be sent.

Messages from Call Point can be routed to individual staff members or groups of staff as required with every message showing the location of the Call Point tablet and unique button message.

There is no limit to the number of Call Point tablets that can be utilised on a single system, each Call Point has a location name which is sent along with the message when staff are called. Enabling staff members to know what location is calling and the requirement.

When a Call Point button is activated the user is immediately notified by the button changing state from its ready to call state to called state with a distinctive red screen.

Call Point has no limit on range, with Call Point's unique RF technology even the largest sites can receive full coverage.
